PM TRACKER MAINTENANCE SOFTWARE

Get your PMs off paper and your records out of Excel.

A self-hosted maintenance system for manufacturers regulated by the FDA, EMA and Health Canada.

Who it's for

- Plants with PMs on paper, where sheets get lost and signed copies end up in binders.
- Teams keeping records in Excel, where anyone can overwrite a cell and finding out what's overdue means asking around.
- People who have never used maintenance software. Import your asset and PM lists and start small.

The dashboard shows what's overdue, which machines are on hold and what's waiting for approval. Sample data.

What's in it

Drag-and-drop planning

Supervisors move PMs where they fit as the week changes.

Auto scheduling

If nobody has planned the week, the work is scheduled and marked as auto-scheduled.

Live board

A wall display of work due, your team, machine availability and planned downtime.

PMs and checklists

Reusable PM templates, with checklists for each task.

Work orders

Work saves as it goes, and supervisors approve it when it's done.

Breakdown requests

Report a breakdown, get it repaired, then send it for QA review.

Machine holds

Take a machine out of service, and lift the hold when it's ready.

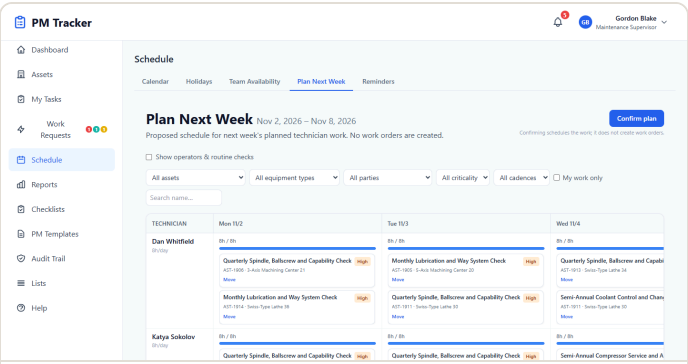

Spare parts

Track the spares your team uses and what's left in stock.

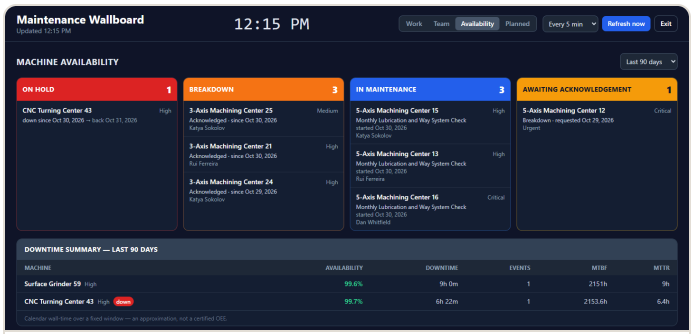

Reports and history

Maintenance cost reports and a printable history for each machine.

A look inside

The weekly plan, by technician and day. Sample data.

The live board's machine availability view. Sample data.

Built for regulated plants

Every action goes into an append-only audit trail, designed to support your validation. Access follows each person's level and discipline. PM Tracker runs on your own server, licenses are checked locally, and every plan includes unlimited users.

See PM Tracker on your equipment list.
Pricing, a calculator and the contact form are at raviknight.github.io/website.
