FORGE MANUFACTURING ERP

Replace the spreadsheets, or the ERP your team works around.

Forge is for contract manufacturers: machine shops, aerospace, medical device, defense and ISO 9001 shops.

Who it's for

- Shops running on Excel and Word, where quotes, travelers and NCRs are separate files and the schedule depends on one person.
- Shops on an old ERP, with dated screens, workflows from years ago, and a team that keeps its own spreadsheets to get around them.

A routing with its steps and inspections. Sample data.

What's in it

Quote to cash

Quotes, orders, work orders, shipping, certificates of conformance and invoicing.

Parts, BOMs and routings

A part master with revisions, bills of materials and routings.

Scheduling

Jobs plan back from their due dates using routing estimates. A module adds machine lanes you can drag.

Job costing

See what a job actually cost, and compare it with the quote.

Purchasing and inventory

Purchasing, receiving and stock, with lot traceability.

Ballooning and inspection

Balloon your prints and inspect against inspection guide sheets (IGS).

Quality

NCR and CAPA, gages and calibration, and internal audits.

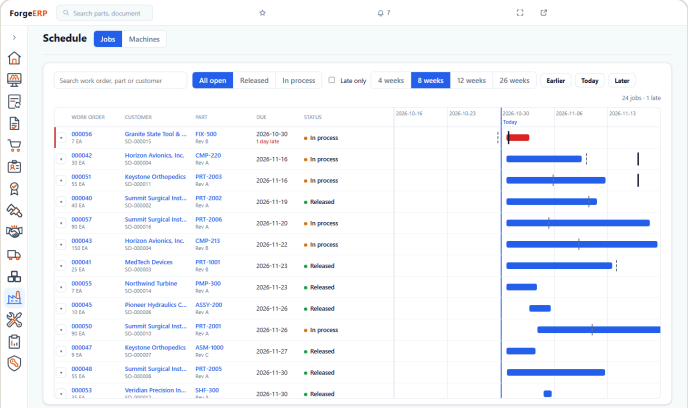

Documents and change control

Controlled documents, a form designer, and engineering and document change notices.

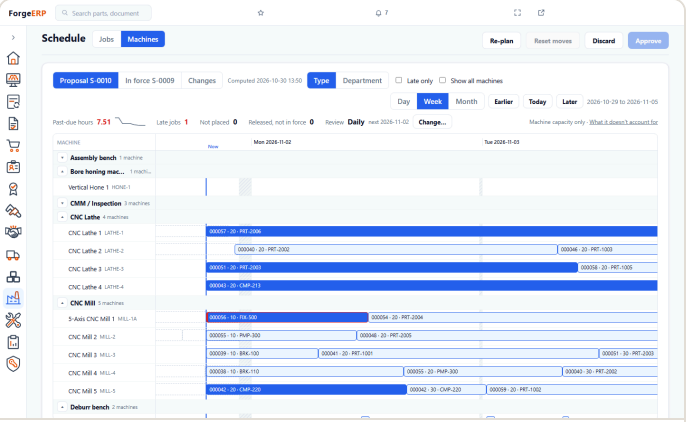

Maintenance

PM Tracker runs inside Forge as its maintenance module.

A look inside

The job schedule flags late work. Sample data.

The machine board gives each machine a lane. Sample data.

Designed to support regulated work

Forge supports practices that AS9100, ISO 13485 and 21 CFR Part 11 ask for, including audit trails, electronic signatures and controlled documents. Certification and validation remain with your shop. Forge runs on your own PC or server.

See Forge on a job like yours.
Pricing, a calculator and the contact form are at raviknight.github.io/website.
